

## AMENDMENTS TO THE CLAIMS

*The following listing of the claims replaces all prior claim versions and listings.*

1. (Currently Amended) A computer readable medium containing a computer program for managing a family of systems having a shared family architecture based upon commonly used generic building blocks of software, said family of systems comprising at least one system, and wherein

a component framework that comprises a skeleton of software architecture of generic and specific requirements, wherein said generic requirements focuses on generic meaning of service interfaces and said specific requirements provides for service specific issues and supports participating software plug-in components;

individual software plug-in components provides one or more services/functions and

the component framework defines roles/actions providing one or more common interfaces for communication of services of several plug-in components that manipulate hardware associated with the component framework.

2. (Currently Amended) ~~A complex system being a member of the family~~ The computer readable medium as claimed in Claim 1, wherein the component framework includes an inventory function for assessing available services in the participating plug-in components.

3. (Currently Amended) ~~A complex system~~ The computer readable medium as claimed in Claim 2, wherein the inventory function includes initializing the one or more services.

4. (Currently Amended) ~~A complex system~~ The computer readable medium as claimed in Claim 2, wherein the inventory function assesses available services at initialization of the at least one system or during run-time of the at least one system.

5. (Currently Amended) ~~A complex system~~ The computer readable medium as claimed in Claim 2, wherein the inventory function maintains a list of the available services.

6. (Currently Amended) ~~A family of complex systems~~ The computer readable medium as claimed in Claim 1, wherein the family members are medical diagnostic systems-comprising an x-ray examination apparatus.

7. (Currently Amended) A complex system~~[[ - ]]~~ comprising an x-ray examination apparatus having a computer readable meaning comprising software architecture and wherein the complex system comprising:

[[ - ]] a component framework that comprises a skeleton of software architecture of generic and specific requirements, wherein said generic requirements focuses on generic meaning of service interfaces and said specific requirements provides for service specific issues and supports participating software plug-in components;

[[ - ]] individual software plug-in components providing one or more services including rotation displacements of components of an X-ray apparatus including X-ray source and X-ray detector, and a patient table, and

the component framework defines roles/actions that provide one or more common interfaces for communication of services of several participating software plug-in components.
